PROJECT

Zing MP3 Clone

In my project, I utilized HTML, CSS, and JavaScript to construct a multifunctional music website, inspired by ZingMp3. The website provides a conventional music listening experience, integrates features such as music playback, fast forward/rewind, song selection, and notably, a karaoke function with synchronized lyrics.

- **Deploy:** <https://duonghiep416.github.io/clone-zingmp3/>

Trello Clone

Developed a Trello clone project utilizing Tailwind CSS, ReactJS, and Redux Toolkit for state management. The implementation includes the integration of react-beautiful-dnd to facilitate drag-and-drop task management. The application seamlessly interacts with APIs to execute essential functions such as adding, editing, and deleting tasks.
